2.6 测试程序步骤

 Connect RX and TX by USB2COM USB Dongle with 115200 bps, 8bits, Parity (none), 1 and Connect TM-KEY to LOW

Date : 2020.04.07

Power up AP55 to start the test items.

```
AP55 FIRMWARE VERSION = 0.18
```

- 2 TURN ON RED LED
- 3 battery voltage=3139
- 4 sensor voltage=525
- 5 open solenoid
- 6 captors voltage=1238
- 7 TURN ON GREEN LED

Item 1: Check firmware version? Here should be 0.18.

Item 2: Test the RED LED ON and GREEN LED OFF.

Item 3: If Supply Voltage = 3.0v, the battery measure acceptance range is +/- 4%, that range is 2880 to 3120.

Item 4: Photo Sensor test, product need to setup a stable environment, and use the golden sample to check the value, for example golden sample value is 500, then the acceptable range is +/- 8%, that mean 460 to 540.

- Item 5: Test JIG should connect to Solenoid, here the solenoid should open.
- Item 6: Check the Charge voltage, the charge voltage must between 1200 to 1300.
- Item 7: Test the GREEN LED ON and RED LED OFF.
- Item 8 , Switch Pin Position Testing
 - 5.1 Open Pin 1 to Pin 9, if PASS it will show below message.

```
KEY CODE = 0x1FF PIN 1 TO PIN 9 OPEN ARE CHECKED PASS NEXT STEP, SHORT PIN 1 TO 9 WITH PIN 19
```

5.2 Short Pin 1 to Pin 9 with Pin 19, if PASS it will show below message

```
KEY CODE = 0x000 PIN 1 TO PIN 9 SHORT ARE CHECKED PASS
```

5.3 Open Pin 10 to Pin 18, if PASS it will show below message

```
KEY CODE = 0x1FF PIN 10 TO PIN 18 OPEN ARE CHECKED PASS
NEXT STEP, SHORT PIN 10 TO 18 WITH PIN 20
```

5.4 Short Pin 10 to Pin 18 with Pin 20, if PASS it will show below message

```
KEY CODE = 0x000 PIN 1 TO PIN 9 SHORT ARE CHECKED PASS
NEXT STEP, OPEN TM-KEY
```

Date : 2020.04.07

6. Remove TM-KEY, let TM-KEY is HIGH, then check below items

9 turn off green and red led

10 close solenoid

11 goto sleep, current < 10uA

Item 9: RED and GREEN LED is OFF

Item 10. The Solenoid is closed

Item 11. The sleep current < 10uA.
